Reverse Fabric Colour

Available on printed 600D PU Coated Polyester products.
Refer to artwork layout to show reverse colour, or talk to one of the team.

White
Standard

Black
Upon request.

Printing Process Dye Sublimation

Dye sublimation printing involves the use of a digital printer to produce a print on sublimation transfer paper.

The sublimation paper is then placed into a heat press with the marquee fabric and exposed to a temperature of 200 degrees Celsius. The artwork is then transferred from the paper to the marquee fabric.

The marquee fabric has the artwork embedded in the material and the design will not scratch from the surface. The fabric has a matte finish, which photographs well and suits indoor and outdoor use.

Colours Pantone Matching

All printing is done using CMYK on a large format printer. Pantone colours / PMS can be supplied and they will be converted to a CMYK breakdown for digital printing.

Please state to your graphics Coordinator if you require colour matching to either a Pantone or a physical sample. While we make every effort to match Pantone colour, slight variation can occur.

Please also keep in mind that colours displayed on a device or monitor can differ from the printed product. While every effort is made to match colours between product types, there can be variation between colour from polyester marquee fabrics, to PVC material and banner fabrics.

WE CAN CUSTOM PRINT
ANY COLOUR*

Graphics Supplying your artwork

Thank you for choosing Extreme Marquees!

When purchasing online, you can supply your artwork description, colours and logos and fonts. You can also supply them to admin@extreme-marquees.com.au.

Need help? Call our expert graphic coordinators on 1300 850 832 for free artwork design services.

You can also supply all files via email to your sales person. If you are more experienced designer or marketing agency please find artwork templates in our Resource Center or request templates from your sales person.

Artwork Approval Production

Once artwork layout is created and you are happy to approve, please fill out the below form and provide payment for your order.

Digital Printing Process

580 GSM PVC

Large format digital printing refers to method of printing from a digital based image directly to the PVC marquee material.

Once the print has dried a hot lacquer is applied to the print surface to seal the print to avoid scratches.

Colours Pantone Matching

All printing is done using CMYK on a large format printer. Pantone colours / PMS can be supplied and they will be converted to a CMYK breakdown for digital printing.

Please state to your graphics Coordinator if you require colour matching to either a Pantone or a physical sample. While we make every effort to match Pantone colour, slight variation can occur.

Please also keep in mind that colours displayed on a device or monitor can differ from the printed product. While every effort is made to match colours between product types, there can be variation between colour from polyester marquee fabrics, to PVC material and banner fabrics.
